EXAMINER HOLLWEG, THOMAS A				
ART UNIT 2879		PAPER NUMBER		
MAIL DATE 10/03/2008		DELIVERY MODE PAPER		

**Please find below and/or attached an Office communication concerning this application or proceeding.**

The time period for reply, if any, is set in the attached communication.

### Office Action Summary

**Application No.**

10/582,737

**Applicant(s)**

KANAZAWA ET AL.

**Examiner**

Thomas A. Hollweg

**Art Unit**

2879

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 24 June 2008.  
2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.  
3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1-11 is/are pending in the application.  
4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.  
5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.  
6) ☒ Claim(s) 1-11 is/are rejected.  
7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.  
8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.  
10) ☒ The drawing(s) filed on 13 June 2006 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).  
11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).  
a) ☒ All b) ☐ Some \* c) ☐ None of:  
1. ☒ Certified copies of the priority documents have been received.  
2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.  
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

**Attachment(s)**

- 1) ☐ Notice of References Cited (PTO-892)  
2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-946)  
3) ☐ Information Disclosure Statement(s) (PTO/CIS)  
4) ☐ Interview Summary (PTO-413)  
5) ☐ Notice of Informal Patent Application  
6) ☐ Other: \_\_\_\_\_  
Paper No(s)/Mail Date \_\_\_\_\_

**DETAILED ACTION**

***Acknowledgment of Amendment***

1. Applicant's Amendment, received June 24, 2008, is acknowledged. No claims are added or cancelled. Claims 1-11 are currently pending.
2. Applicant's amendments to claim 1 are acknowledged. Claim objections and the 35 U.S.C. 112, second paragraph rejection of claim 1 are withdrawn.
3. Applicant's amendments have not patentably distinguished the present claims from the claims of Applicant's now issued Patent, U.S. 7,348,730. Therefore the obviousness type double patenting rejection is not withdrawn.

***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 1-4, 9 and 11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Zhu et al., U.S. Patent Application Publication No. 2003/0141826 A1, in view of itself.
6. With regard to claim 1, in figures 1 and 2, Zhu discloses a metal halide lamp (10) comprising: an arc tube (20) having an envelope made of translucent ceramic, a pair of electrodes (33a, 33b) disposed therein, and one or more halides are enclosed therein; and a casing tube (11) surrounding at least a portion of the arc tube (20), the portion positionally corresponding to a space between the electrodes (33a, 33b), wherein  $L/D \geq$

4 [0026], where L is a length of the space between the electrodes and D is an internal diameter of the arc tube [0018-0026]. Zhu discloses that the internal diameter of the arc tube is 4 or 5 mm, however, Zhu does not expressly disclose that  $R/r \geq 3.0$ , where R is an internal diameter of the casing tube and r is an external diameter of the arc tube within a region positionally corresponding to the space between the electrodes, where an outer circumference of the arc tube comes closest to an inner circumference of the casing tube, in the radial direction.

7. One having ordinary skill in the art would understand that the arc tube of a metal halide lamp operates at a very high temperature, and conventionally the outer casing is spaced away from the arc tube so that the outer casing is not subject to high heat during operation, and heat cycling when the lamp is turned on and off, which can lead to cracking of the outer casing. It has been held that where the general limitations of the claim are taught by the prior art, discovering an optimum or workable range involves only routine skill in the art (*In re Aller*, 105 USPQ 233 (CCPA 1955)).

8. Therefore, at the time of invention, it would have been obvious for a person having ordinary skill in the art to construct the Zhu metal halide lamp where  $R/r \geq 3.0$ , where R is an internal diameter of the casing tube and r is an external diameter of the arc tube within a region positionally corresponding to the space between the electrodes, where an outer circumference of the arc tube comes closest to an inner circumference of the casing tube, in the radial direction, in order to avoid cracking the outer casing.

9. With regard to claim 2, Zhu discloses or suggests all of the limitations, as discussed in the rejection of claim 1, including that  $4.7 \leq R/r \leq 8.0$ , because this is an obvious optimization of ranges.
10. With regard to claim 3, Zhu discloses or suggests all of the limitations, including that  $4 \leq L/D \leq 10$  [0025-0026].
11. With regard to claim 4, Zhu discloses or suggests all of the limitations, including that  $4 \leq L/D \leq 10$  [0025-0026].
12. With regard to claim 9, Zhu discloses that the halides include sodium [0005].
13. With regard to claim 11, in figure 11, Zhu discloses a metal halide lamp; and a lighting circuit for illuminating the metal halide lamp [0046].
14. Claims 5 and 6 rejected under 35 U.S.C. 103(a) as being unpatentable over Zhu et al., U.S. Patent Application Publication No. 2003/0141826 A1 as applied to claims 1 and 4 above, and further in view of Gu et al., U.S. Patent No. 6,441,564 B1.
15. With regard to claim 5, Zhu discloses or suggests all of the limitations, as discussed in the rejection of claim 1, however, Zhu does not expressly disclose that the arc tube is disposed in a hermetically-sealed space, and a degree of vacuum in the space is no more than  $1 \times 10^1$  Pa at 300 K.
16. Gu, in figure 1A, teaches a high pressure lamp having an arc tube (1) and a casing (4) where the arc tube (1) is disposed in a hermetically-sealed space, and the space is kept under vacuum (col. 4, lines 19-22). One having ordinary skill in the art would understand that a space kept under vacuum would have a pressure of no more than  $1 \times 10^1$  Pa at 300 K.

17. Therefore, at the time of invention, it would have been obvious for a person having ordinary skill in the art to construct the Zhu metal halide lamp where the arc tube is disposed in a hermetically-sealed space, and a degree of vacuum in the space is no more than  $1 \times 10^1$  Pa at 300 K, as taught by Gu. When the space between the arc tube and the casing is kept under vacuum, heat does not transfer from the arc tube to the casing efficiently, preventing the casing from being damaged by the heat of the arc tube during lamp operation.

18. With regard to claim 6, Zhu discloses or suggests all of the limitations, as discussed in the rejection of claim 4, however, Zhu does not expressly disclose that the arc tube is disposed in a hermetically-sealed space, and a degree of vacuum in the space is no more than  $1 \times 10^1$  Pa at 300 K.

19. Gu, in figure 1A, teaches a high pressure lamp having an arc tube (1) and a casing (4) where the arc tube (1) is disposed in a hermetically-sealed space, and the space is kept under vacuum (col. 4, lines 19-22). One having ordinary skill in the art would understand that a space kept under vacuum would have a pressure of no more than  $1 \times 10^1$  Pa at 300 K.

20. Therefore, at the time of invention, it would have been obvious for a person having ordinary skill in the art to construct the Zhu metal halide lamp where the arc tube is disposed in a hermetically-sealed space, and a degree of vacuum in the space is no more than  $1 \times 10^1$  Pa at 300 K, as taught by Gu. When the space between the arc tube and the casing is kept under vacuum, heat does not transfer from the arc tube to the

casing efficiently, preventing the casing from being damaged by the heat of the arc tube during lamp operation.

21. Claims 7, 8 and 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Zhu and Gu as applied to claims 4 and 5 above, and further in view of De Maagt et al., U.S. Patent No. 5,986,405 B1.

22. With regard to claim 7, Zhu discloses or suggests all of the limitations, as discussed in the rejection of claim 4, however, Zhu does not expressly disclose that one or more oxygen-releasing getters are disposed in the space. De Maagt, in figure 1, discloses a high pressure discharge lamp one or more oxygen-releasing getters (6) are disposed in the space between the arc tube (1) and the outer casing (4) (col. 2, lines 62-67 & col. 5, lines 6-14).

23. At the time of invention, it would have been obvious for a person having ordinary skill in the art to construct the Zhu metal halide lamp with one or more oxygen-releasing getters are disposed in the space, as taught by De Maagt. Including this getter will prevent the loss of sodium from the gas filling of the discharge vessel, as taught by De Maagt (col. 1, lines 25-28).

24. With regard to claim 8, Zhu and Gu disclose or suggest all of the limitations, as discussed in the rejection of claim 6, however, neither Zhu nor Gu expressly discloses that one or more oxygen-releasing getters are disposed in the space. De Maagt, in figure 1, discloses a high pressure discharge lamp one or more oxygen-releasing getters (6) are disposed in the space between the arc tube (1) and the outer casing (4) (col. 2, lines 62-67 & col. 5, lines 6-14).

25. At the time of invention, it would have been obvious for a person having ordinary skill in the art to construct the Zhu metal halide lamp, as modified by Gu, with one or more oxygen-releasing getters are disposed in the space, as taught by De Maagt. Including this getter will prevent the loss of sodium from the gas filling of the discharge vessel, as taught by De Maagt (col. 1, lines 25-28).
26. With regard to claim 10, Zhu discloses that the halides include sodium [0005].

### ***Double Patenting***

27. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).
28. A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.
29. Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).
30. Claims 1-6 and 11 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 2, 3 and 6 of Kakisaka et al., U.S. Patent No. 7,348,730, application No. 10/582844. Although the conflicting claims are

not identical, they are not patentably distinct from each other because, Kakisaka, claim 2 contains all of the limitations of claim 1 of the present application. Also, Kakisaka, claim 2, contains all of the limitations of claims 2, 3 and 4 of the present application. Further, Kakisaka, claim 3, contains all of the limitations of claims 5 and 6 of the present application. And lastly, Kakisaka, claim 6 contains all of the limitations of claim 11 of the present application. Therefore, claims 1--6 and 11 are rejected because they are not patentably distinct from the cited claims of the Kakisaka Patent.

### ***Response to Arguments***

31. Applicant's arguments that Zhu seeks to address a different problem than applicant is irrelevant. Applicant's claims are drawn toward the dimensions of a lamp. The prior art either discloses all of applicant's dimensional limitations or suggests the dimensions such applicant's claimed limitations would be obvious to one having ordinary skill in the art.

32. Applicant misquotes the office action. The office action states "Zhu does not expressly disclose that  $R/r \geq 3.0$ ." The reason Zhu does not expressly disclose this limitation, is because Zhu does not expressly disclose the internal diameter of the casing tube. However, the casing tube disclosed in Zhu does have an internal diameter.

33. Applicant's very broad claim limitation,  $R/r \geq 3.0$ , requires only that the internal diameter of the casing tube be larger than three times the external diameter of the arc tube. As a starting point, the internal diameter of the casing tube must be larger than the external diameter of the arc tube, or the arc tube would not fit within the casing tube. One having ordinary skill in the art would understand that the internal diameter of the

casing tube would have to be more than just slightly larger than the external diameter of the arc tube, or much of the heat generated by the arc tube would transfer to the casing tube and the casing tube would risk failure.

34. It would be obvious to one having ordinary skill in the art that the Zhu lamp could be constructed with a wide range of diameters for the outer casing, and that there is a benefit, of longer lamp life, where the diameter is larger. Therefore, it would have been obvious to one having ordinary skill in the art to construct the outer casing such that internal diameter is three times or more greater than the external diameter of the arc tube.

35. Examiner notes, in response to applicant's arguments, that no official notice has been taken. Examiner further notes that applicant's arguments support the examiner's position that where the internal diameter of the casing tube is too small cracking may occur, with the statement "[c]racking of the casing tube results from hardening of the tube due to high temperatures." It is possible that constructing a lamp where the outer casing is moved away from the arc tube would both prevent cracking and reduce the amount of dispersed ceramic that builds up on the inner surface of the casing tube, the applicant's aim.

36. Applicant's argument regarding the rejections of claims 5 and 6 are not convincing. The applicant claims a vacuum of a certain degree to prevent heat transfer away from the arc tube. The prior art cited teaches a vacuum for the same purpose. One having ordinary skill in the art would understand that a pressure of no more than 1

$\times 10^1$  Pa at 300K is a very low pressure. A space kept under this pressure would be considered kept in a vacuum.

***Conclusion***

37. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

38. A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

39. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thomas A. Hollweg whose telephone number is (571) 270-1739. The examiner can normally be reached on Monday through Friday 7:30am-5:00pm E.S.T..

40. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nimesh Patel can be reached on (571) 272-2457. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

41. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for

Art Unit: 2879

published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR only.

For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
